Weber County Utah Sheriff's Office Conducts Successful Test Sending Video Wirelessly from Remote Camera to their Mobile Command Center and the Internet Simultaneously.

(June 26, 2006 – Naperville, IL)

The Weber County Utah Sheriff's Office is taking emergency preparedness quite seriously. This month a test was conducted in Weber County of a simulated hazardous incident taking place on a county road with a remote camera set up nearby that would allow the County Executives from their locations to view live video from the incident remotely over the Internet. LeapFrog Technologies, a Naperville, IL based software development company, participated in this important test with the Sheriff's Office by contributing the remote camera and the PSG2 (Public Safety Generation 2) Middleware Software solution that distributed the video from the remote camera and the Mobile Command Post out over the Internet.

"This was an important capability that we wanted to develop for Weber County; to enable on-scene responders to broadcast a live video feed to our County Executives and Sheriff in the Command Post, the Emergency Operations Center or even in their offices. This gives them the ability to receive real time video access from anywhere in the county over our 5.8 GHz county wide wireless network. Now, county executives can view live video captured from potentially hazardous incidents empowering them to take immediate and corrective actions in the Command Post, EOC or even their offices," said Lance Peterson, Director Weber County Emergency Management & Homeland Security Weber County Sheriff's Office. Dr. Shao Hsueh Ph. D. President Leapfrog Technologies said, "The PSG2 Middleware Software provided the missing link that allowed the live video capture at the scene by the remote camera to be broadcast out over the Weber County 5.8GHz network."

About LeapFrog Technologies:

LeapFrog Technologies is a wireless application software development company based in Naperville, IL. LeapFrog Technologies services companies in Financial Services, Insurance, Conventions/Trade Shows and Warehousing. Leapfrog Technologies developed the entire floor trading operation for the Chicago Board of Trade. Each business day commodities futures contracts are bought and sold using the wireless hand held application developed by LeapFrog Technologies.
